## Logistics exec Paul de Roulhac joins RM2 International

Chatham, New Jersey – March 26, 2015 – Paul de Roulhac, a 20-year veteran of the logistics industry, has joined RM2 International as Executive Vice President, Supply Chain Solutions. Responsible for the sales and delivery process in North America, he will oversee the account management and customer service teams and reports to William Sanders, RM2's Chief Operating Officer.

Mr. de Roulhac has extensive experience across the international transportation and contract logistics fields, achieving considerable success at every stop in his career. Most recently he served as Sr. Director of Global Accounts for Ingram Micro Inc., a global distributor in Santa Ana, California. Since 2010, he achieved significant portfolio growth and expanded the logistics footprint while directing the sales and account teams across four regions.

Prior to Ingram Micro, Mr. de Roulhac spent the majority of his career working for Fortune 100 logistics companies including DHL Deutche Post and UPS.

"This was a great opportunity to join an extraordinary company. Despite the transportation processes and needs of global business having rapidly evolved, the shipping pallet has not changed significantly since 1940. The innovation and vision at RM2 represents a quantum leap forward and a disruptive force in the market," said Mr. de Roulhac, who earned a Bachelor of Arts degree from Santa Clara University.

"Over the past year, interest has been building rapidly and our manufacturing continues to ramp up. My goal is to develop our sales and implementation organization to capitalize on that demand, serve our clients needs, and gain significant traction in the market."

Mr. de Roulhac can be contacted via email at <a href="mailto:paul.deroulhac@rm2.com">paul.deroulhac@rm2.com</a> or call him at (415) 531-2720.

## **About RM2 International**

RM2 International S.A. specializes in pallet development, manufacture, supply and management. Founded in 2007, the company is establishing a leading presence in global pallet supply and improving the supply chain of manufacturing and distribution businesses through the effective and efficient use and management of composite pallets, allowing clients to *move it better*. The multi-trip, heavy-duty composite pallet is suitable for use in automated and manual areas of the supply chain with high traffic levels.
